

Increased efficiency with Modul-Fleet

Every day fleet managers are faced with the challenge to make operations run smoothly, reduce costs and improve efficiency.

Modul-System's new fleet management tool will assist with all of the above.

"Modul-Fleet will assist in keeping your customers and employees happy, and at the same time increase your efficiency and profitability", says Thomas Johansson, Vice President of Modul-System.

For many years', Modul-System has been delivering turnkey solutions for service vehicles. The company is now broadening its scope, and the latest addition to the portfolio is a fleet management system – Modul-Fleet.

Simplified, a dongle is installed in each vehicle, which collects data about mileage, fuel consumption, journeys, etc. The data is transmitted using Bluetooth technology. All data is saved to the cloud, and can be accessed using a phone, tablet or computer. No additional products are required.

"What makes our product stand out from others available on the market today, is that it connects the planning module with the driving log", Thomas Johansson explains.

A lot can happen during a day. Customer visits might take longer than expected, which can have an impact on upcoming appointments. Modul-Fleet lets you be proactive, visualize your planning and rearrange as changes occur.

"The drivers will be able to see the updated schedule directly in the app, and the integrated chat function will further facilitate the communication between back office and drivers", says Johansson.

Thanks to the analysis and reporting tool, it's possible to analyze and measure the outcome for improved efficiency. You can also, in a simple way, register work hours and create reports, which will reduce administration.

"The digital, and automatically generated driving journal, which meets all government demands, is included", says Thomas Johansson.

Simplified, Modul-Fleet enables you to increase your efficiency, improve the way you work, and reduce administration.

"A quick return on investment for many companies", concludes Thomas Johansson.
